Modifications are provided for information purposes only!

Supporters of CBTricks.com paid for the hosting so you would have this file.

CBTricks.com is a non-commercial personal website was created to help promote the exchange of service, modification, technically oriented information, and historical information aimed at the Citizens Band, GMRS (CB "A" Band), MURS, Amateur Radios and RF Amps.

CBTricks.com is not sponsored by or connected to any Retailer, Radio, Antenna Manufacturer or Amp Manufacturer, or affiliated with any site links shown in the links database. The use of product or company names on my web site is not endorsement of that product or company.

The site is supported with donations from users, friends and selling of the Site Supporters DVD's to cover some of the costs of having this website on the Internet instead of relying on banner ads, pop-up ads, commercial links, etc. Thus I do not accept advertising banners or pop-up/pop-under advertising or other marketing/sales links or gimmicks on my website.

ALL the money from donations is used for CBTricks.com I didn't do all the work to make money (I have a day job). This work was not done for someone else to make money also, for example the ebay CD sellers.

All Trademarks, Logos, and Brand Names are the property of their respective owners.
This information is not provided by, or affiliated in any way with any radio or antenna Manufacturers.

Thank you for any support you can give.

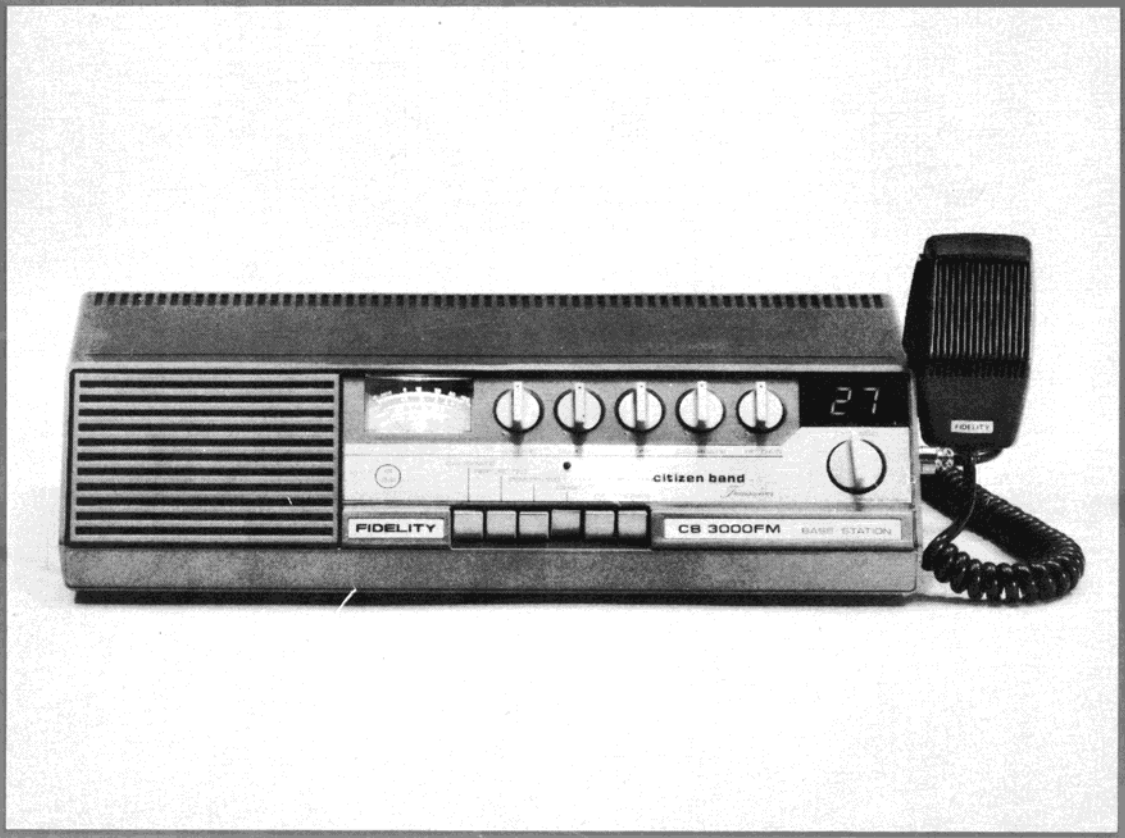
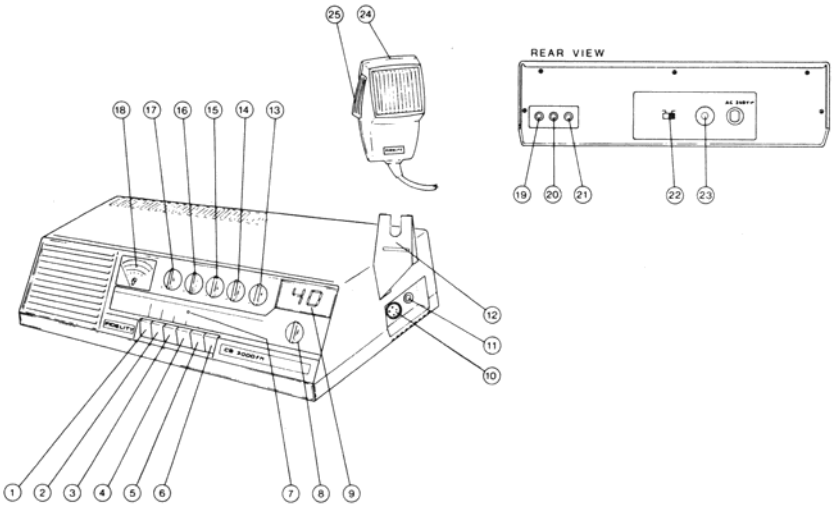
40 CHANNEL FM TRANSCEIVER
BASE STATION



INDEX

Service Department
FIDELITY RADIO PLC
St. Leonards Road, London, NW10 6ST
Telephone: 01-965 9235 (6 lines)

PART NO. 44656



CONTROL IDENTIFICATION

1. Calibrate Button
2. Reflected Button
3. Power/Signal Button
4. Channel 9 Button
5. P.A. Button
6. Phones Button
7. Channel 9 Indicator
8. Channel Selector
9. Channel Indicator
10. Microphone Socket
11. Headphone Socket
12. Microphone Holder
13. R.F. Gain Control
14. Calibrate Control
15. Tone Control
16. Squelch Control
17. Volume, On/Off Control
18. S/RF Meter
19. External Speaker Socket
20. P.A. Speaker Socket
21. Tape Recorder Socket
22. −10dB ATT. Switch.
23. Antenna Socket
24. Microphone
25. Microphone Transmit Key

SPECIFICATION

SEMICONDUCTORS

IC's 3
Transistors 25
Diodes 32
LED Display

General
Channels: 40 digital PLL synthesised
Frequency range: See last page
Operating temperature range: −5 degree C
to + 45 degree C
Power Source: 220–250 V A.C 50 Hz
Dimensions:
Depth: 185m/m (7-9/32")
Height: 89m/m (3½")
Width: 394m/m (15½")

Receiver.
Conversion system: Dual conversion
superheterodyne
IF: 10.7 mHz 1st and 455 kHz 2nd
Channel display: Digital 7 segment LED's
Audio output power: > 1.5W into 8 Ohm
Sensitivity: < 1 microvolt @ 20 dB NQ
Adjacent channel rejection: > 50 dB
Spurious emission: < 20nW
Squelch sensitivity: 1 to 10 microvolt

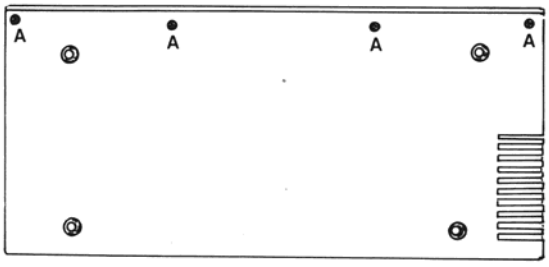
Transmitter.
Modulation: FM
RF power output: 4W
Frequency tolerance: $<\pm 1.5$ kHz
RF power attenuator: >10 dB
Frequency rseponse: 500 to 2,500 Hz
+ 4/- 12 dB
Frequency deviation: $>\pm 1.5$kHz
@ 1,250 Hz audio
Adjacent channel power: <10 microwatt
Spurious emission: (1) <50nW within
the following frequency bands –
80 MHz – 85 MHz
87.5 MHz – 118 MHz
135 MHz – 118 MHz
174 MHz – 230 MHz
470 MHz – 862 MHz
(2) <0.25 microwatt at any other
frequency.

OTHER FACILITIES.
1) S.W.R. (Standing Wave Radio)
measurement capability
2) Headphone socket
3) Channel 9 LED indicator
4) External speaker socket
5) P.A. speaker socket.
6) Tape recorder socket

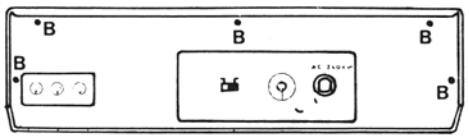
CHANGES TO SPECIFICATION

The aim of Fidelity Radio is continually to improve their products and therefore reserve the right to alter specifications.

BOTTOM VIEW



REAR VIEW



DISMANTLING PROCEDURE

TOP CABINET

Remove four screws marked 'A' (above diagram) and five screws marked 'B'. Then remove control knobs and the channel selector knob. Slide the top towards the front to unslot from the push button knobs.

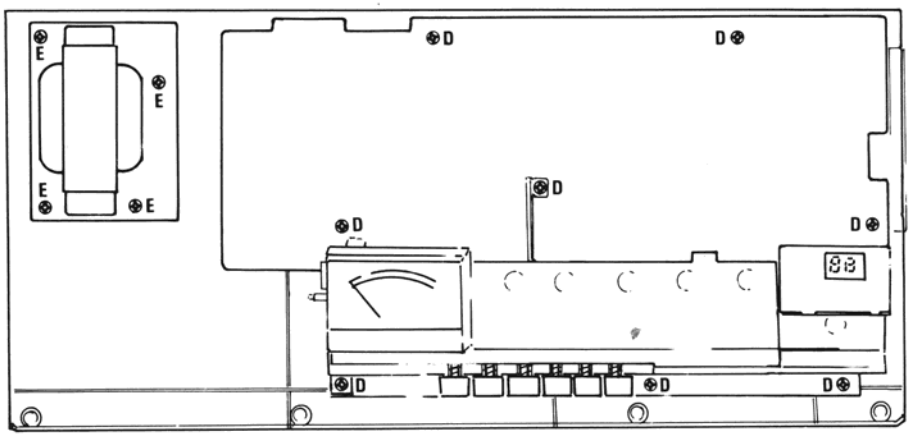
NOTE: If the control knobs are tight, then we suggest that a piece of string be hooked from underneath the knobs and pulled so as to remove the knobs.

CHASSIS

To remove chassis from the base, remove eight screws marked 'D' on below diagram. Unsolder the link and the capacitor from the aerial socket and the relevant leads from the microphone socket. Then carefully unslot the chassis from the base.

Screws 'E' denote mains transformer bracket fixing screws.

INSIDE TOP VIEW



ALIGNMENT PROCEDURE

A. LOCAL OSCILLATION SECTION (P.L.L. SECTION)

1. Set the channel selector to channel 20.
2. Set CB to receiving condition, then connect an oscilloscope to pin 14 of IC2 to check for high level, i.e. logic '1' (+ 7·5V).
3. Set CB to transmitting condition and adjust TC1 to give + 7·5V on pin 14, i.e. high level.
   Check: Pin 20 upon transmitting should be at low level, i.e. logic '0'.

B. TRANSMITTER

1. Set channel at CH −20, connect a frequency counter and RF VTVM to C110 and adjust L6, L8, L9, and L10 to give maximum reading of RF VTVM and frequency of 27·791XX. Then adjust TC2 to correct the frequency to 27·79125.
2. Connect an RF wattmeter and a 50 ohm dummy load across the antenna connector and adjust L6, L8, L9, L10, L11 and L13 to maximum output. Then adjust L15 so as to give an output power of 3·7 watts.
3. Adjust SVR3 so that the needle of S/RF meter is at the position of 3·5 of RF power indication.
4. Modulation level adjustment:
   Feed a 1KHz audio signal at 5mV to the Mic. input and adjust SVR2 so that the deviation is ± 1·5 KHz.

C. RECEIVER

1. **IF Section**
   a) Connect a sweep signal generator to base of Q3.
   b) Connect an oscilloscope to R29.
   c) Set sweep generator to 455 KHz and adjust T3 and T4 for maximum output.
   d) Adjust T5 and T6 for maximum output and an 'S' curve.

2. **Mixer Section**
   a) Connect the SSG to the antenna connector. Set SSG to 27·79125 MHz (CH20) and adjust the output so that the modulation signal is at 1 KHz and Dev. ± 1·5 KHz.
   b) Connect an oscilloscope and VTVM to the speaker.
   c) Set the tested unit to CH −20 and adjust L1, L2, L3 and T2 so that the reading on VTVM is at maximum position. When making this alignment the output of the SSG should be adjusted accordingly so that the output on VTVM is at a reference level.
   d) Repeat the above for CH −1 and CH −40. The output level of SSG at CH1 to CH −40 should be within ±3db as compared to that at CH −20.
   e) Repeat the above process to check the sensitivity of all other channels.
